

FILTEC
Making Water Safer

Home Water
Treatment
Systems

Safe drinking water is essential for wellbeing. Today a growing number of issues are affecting water quality as water infrastructure ages, demand increases and agricultural production intensifies.

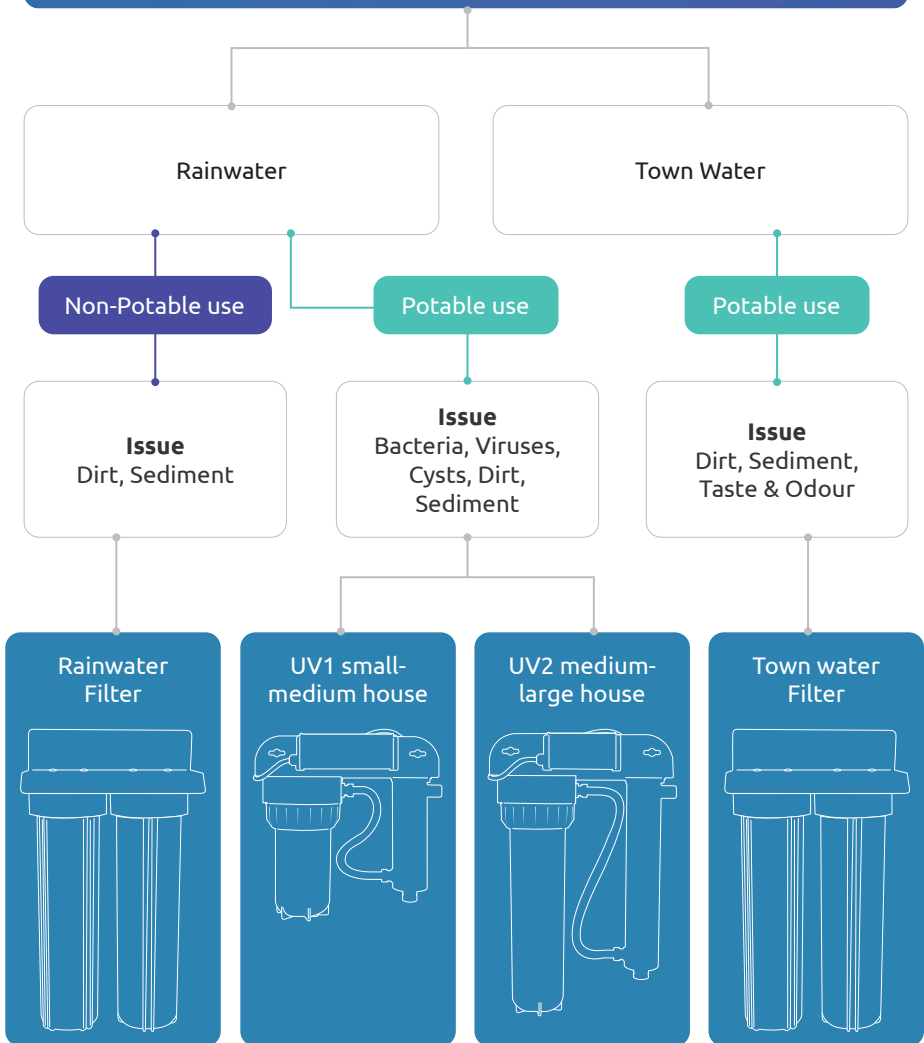

For town water, pollutants such as sediment and rust can enter the network. Although essential for safe drinking water, residual chlorine from municipal treatment can create taste and odour issues.

For rainwater the presence of suspended and dissolved solids or microbiological contamination (*E.coli*, *Giardia* and *Cryptosporidium*) all affect the safety and quality of water entering your home.

FILTEC has a range of products to suit the most common issues for residential water treatment to provide high quality and safe drinking water.

FILTEC
Making Water Safer

Find the right treatment system for your home

Bore water requires specific water analysis. FILTEC will create a bespoke solution based on the test results.

Contact FILTEC to talk about your bore water analysis today.

Common Water Quality Issues

Filter your **Rainwater** to remove sediment for Non-Potable (non-drinking water) applications or make the water safer with the addition of UV purification of microbiological contamination such as E.coli, Giardia and Cryptosporidium.

Improve your **Town water** by filtering out potential pollutants that can enter the network such as sediment and rust. Perceived taste and odour issues can also be addressed by the carbon block cartridge in a FILTEC Town water system.

FILTEC Water Treatment System Features

Whole house treatment

Taste & odour control from carbon block filter

Water source

Lamp life timer & end of lamp life alarm

House sizes:
S (1-2 bed, 1 bathroom)
M (3 bed, 1-2 bathroom)
L (4+ bed, 2+ bathroom)

Safety-Loc™ connector to ensure no accidental UV exposure

Water use

Easy install & maintenance

Pre-filtration sediment removal type

Recommended flow rate (standard UV dose)

Sediment removal rating

Peak flow rate (minimum UV dose)

UV light purification inactivates bacteria, viruses & cysts

Rainwater Filter System

WF20B2PP20MPP5M

Ideally suited to Non-Potable (non-drinking water) applications such as rainwater harvesting for washing machines, toilet flushing and irrigation. Twin 20" Jumbo housings featuring two Polyspun filters for sediment removal. This unit combines practical filtration levels combined with high flow rates and long filter life.

Whole house

Rainwater

Small - Large

Non-drinking water use

Two stage filter

20-5 micron

Easy install & maintenance

Up to 100lpm

115lpm

Rainwater UV Treatment System

VH200F102AF
VH410F202AF

If you rely on rainwater for your household water, ensure it is safe. An advanced high flow depth filter removes unwanted sediment without affecting water pressure and allows UV light to effectively penetrate the water flow to inactivate bacteria, viruses and cysts which are extremely difficult to remove with filtration alone.

Lamp life timer & end of lamp
life alarm

Safety-Loc™

UV light purification

All uses including drinking water

Single high flow depth filter

15-5 micron

Easy install & maintenance

Optional add-on

VH200F102AF
34lpm (30MJ/cm²)

VH410F202AF
70lpm (30MJ/cm²)

VH200F102AF
60lpm (16MJ/cm²)

VH410F202AF
130lpm (16MJ/cm²)

Town Water Filter System

WF20B2PP10MCTO5M

If you feel taste and odour is an issue in your home this town water filter is the solution. Twin 20" Jumbo housings featuring a sediment removal cartridge and a Carbon Block filter for taste and odour removal. This unit has been configured for town water and combines practical filtration levels with high flow rates and long filter life.

At FILTEC we're
committed to
making water safer.

**Safer for drinking, safer for
manufacturing, safer to put
back into our environment.**

Integrating solutions from global leaders in water treatment and backed with **over 25 years experience** in the water industry. FILTEC is making water safer in your community and for your home with its new range of residential water treatment systems.
