

VIQUA's COMMcenter

- Real-time interface is accessible by the touch of a button.
- With the introduction of the new flow meter on VIQUA PRO series systems, the COMMcenter now gives accurate dosage readings, per minute, in real time as flows change.
- Demonstrates to regulators how system has been functioning over an extended period of time.
- Minute-by-minute data is logged permanently to the (optional) miniSD card, allowing easy reference through history for regulatory or troubleshooting purposes.
- COMMcenter is compatible with the following VIQUA systems: PRO10, 20, 30, 50; PRO24-100 & PRO24-186; H+ & K+.

Simple installation with one connection going to the main controller – COMMcenter has the ability to monitor up to 9 systems!

Accurate dose readings shown real-time when used with flow meter.

Continuous recording of alarm conditions or faults — key info for regulators approving UV facilities.
